SUMMARY

Full-Stack Software Engineer with hands-on experience building and deploying production-grade web applications end to end. Skilled in responsive, component-driven frontends (React, Next.js) and scalable REST APIs (FastAPI, Django) backed by PostgreSQL, MySQL, and MongoDB. Experienced across UI development, API design, database optimization, authentication (JWT/OAuth), containerized deployment (Docker/Nginx), and CI/CD, with strong fundamentals in data structures, software architecture, and machine learning integration.

TECHNICAL SKILLS

- Frontend: React.js, Next.js, TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, REST API Integration
- Backend: Python, Django, FastAPI, Flask, Node.js, REST API Design, JWT & OAuth Authentication
- Databases: MySQL, MongoDB, Redis
- DevOps & Cloud: Docker, CI/CD, AWS, Vercel, Netlify, Render, Git, GitHub, GitLab
- Languages: Python, Java, C++, SQL, JavaScript, TypeScript
- Other: Software Architecture, Database Optimization

INTERNSHIP EXPERIENCE

Python Full Stack Developer Trainee | Pentagon Space | Bengaluru, India

Feb 2026 – Present

- Built and integrated RESTful APIs handling secure frontend-backend communication with optimized CRUD operations, following MVC architecture and REST standards.
- Connected React-based frontend components to backend endpoints, handling data rendering, form validation, and error states for a smooth end-to-end user experience.
- Designed MySQL database schemas and optimized queries, improving data retrieval efficiency by 40%.
- Collaborated using Git/GitHub for version control within an agile development workflow, participating in code reviews and sprint planning.

PROJECTS

Stock Price Prediction Platform [View](#)

Next.js, React, TypeScript, FastAPI, TensorFlow/Keras, PostgreSQL, MongoDB, Redis, Docker

- Built a responsive, real-time analytics dashboard in Next.js, React, and TypeScript to visualize live price charts and historical trends for 10,000+ data points processed daily.
- Designed and built RESTful APIs with FastAPI, integrating live market data from Finnhub, Alpha Vantage, and yFinance through optimized asynchronous request handling and Redis caching, cutting data fetch latency by 40%.
- Developed an LSTM-based deep learning model achieving 87% forecasting accuracy on historical stock trend data.

Smart Timetable Management System [View](#)

React, Node.js, REST APIs, Responsive Design

- Developed a full-stack Smart Timetable Management System in React with role-based access control for admin, faculty, and student users.
- Implemented automated timetable generation with conflict-avoidance logic, eliminating manual scheduling conflicts and reducing setup time.
- Designed a polished, responsive dark-themed UI to improve usability and accessibility across devices.

Weather Prediction System [View](#)

Python, Scikit-learn, Pandas, NumPy, Matplotlib

- Designed and trained machine learning models on 50,000+ historical weather records to predict rainfall, temperature, and humidity trends.
- Benchmarked Random Forest, Linear Regression, and XGBoost algorithms, improving prediction accuracy by 18% through feature engineering, normalization, and hyperparameter tuning.
- Built visualizations with Matplotlib to surface model performance and trend insights for end users.

EDUCATION

B.Tech, Computer Science Engineering 2022 – May 2026

A.G. Patil Institute of Technology, Solapur (DBATU)

CERTIFICATIONS & ACHIEVEMENTS

- GSSoC Campus Ambassador 2025 — Promoted open-source contributions and community engagement.
- Software Engineer Intern Certification — HackerRank
